## **2018 Consumer Confidence Report**

Water System Name: Lemoore Naval Air Station (NAS) Report Date: June 27, 2019

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2018 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Lemoore Naval Air Station (NAS) a 750 Enterprise Ave, Lemoore CA, 93246 *or 559-998-4097* para asistirlo en español.

这份报告含有关于您的饮用水的重要讯息。请用以下地址和电话联系 Lemoore Naval Air Station (NAS)以获得中文的帮助: 750 Enterprise Ave, Lemoore CA, 93246 or 559-998-4097

Ang pag-uulat na ito ay naglalaman ng mahalagang impormasyon tungkol sa inyong inuming tubig. Mangyaring makipag-ugnayan sa Lemoore Naval Air Station (NAS750 Enterprise Ave, Lemoore CA, 93246 o tumawag sa 559-998-4097 para matulungan sa wikang Tagalog.

Báo cáo này chứa thông tin quan trọng về nước uống của bạn. Xin vui lòng liên hệ Lemoore Naval Air Station (NAS) tại 750 Enterprise Ave, Lemoore CA, 93246 *or 559-998-4097*\_để được hỗ trợ giúp bằng tiếng Việt.

Tsab ntawv no muaj cov ntsiab lus tseem ceeb txog koj cov dej haus. Thov hu rau Lemoore Naval Air Station (NAS) ntawm 750 Enterprise Ave, Lemoore CA, 93246 or 559-998-4097\_ rau kev pab hauv lus Askiv.

Type of water source(s) in use: Surface Water and Ground Water
Name & general location of source(s): California Aqueduct delivered through Westland's Water District (WWD) and
Naval Air Station Lemoore Admin well No. 7
Drinking Water Source Assessment information: A routine assessment of the water provided by WWD is
currently underway and is estimated to be completed by June 30, 2019
Time and place of regularly scheduled board meetings for public participation:  N/A
For more information, contact: Donna Ogilvie, Installation Environmental Director Phone: (559)998-4078

#### TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

**Public Health Goal (PHG)**: The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Primary Drinking Water Standards (PDWS):** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

**Secondary Drinking Water Standards (SDWS)**: MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

**Treatment Technique (TT)**: A required process intended to reduce the level of a contaminant in drinking water.

**Regulatory Action Level (AL)**: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Variances and Exemptions**: Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.

**Level 1 Assessment**: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

**Level 2 Assessment:** A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

**ND**: not detectable at testing limit

**ppm**: parts per million or milligrams per liter (mg/L)

**ppb**: parts per billion or micrograms per liter (μg/L)

**ppt**: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

#### Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA						
Microbiological Contaminants (complete if bacteria detected)  Highest No. of Detections		Mich		MCLG	Typical Source of Bacteria	
Total Coliform Bacteria (state Total Coliform Rule)	(In a month)	I See notes in Summary of Violation Section for more info (Page 5 of 7)	1 positive monthly sample	0	Naturally present in the environment	
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the year)	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive	0	Human and animal fecal waste	
E. coli (federal Revised Total Coliform Rule)	(In the year)	0	(a)	0	Human and animal fecal waste	

(a) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

TABLE 2	TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER							
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 <sup>th</sup> Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	SEP 17'	33	0.6	0	15	0.2	2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits

Copper (ppm)	SEP 17'	33	0.3	0	1.3	0.3	Not applicable	Internal corrosion of
								household plumbing
								systems; erosion of natural
								deposits; leaching from
								wood preservatives

						deposits; leaching from wood preservatives

Strontium (ppb) - Treated - Distribution	Qtrly 2013 & 2014	Treated 272.5 Distribution 272.5	Treated 200 - 340 Distribution 190 – 360	N/A	N/A
Chromium (total) (ppb) -Treated -Distribution	Qtrly 2013 & 2014	Treated 0.3 Distribution 0.4	Treated 0.20 - 0.36 Distribution 0.31 - 0.48	N/A	N/A
Chromium-6 (ppb) -Treated -Distribution	Qtrly 2013 & 2014	Treated 0.2 Distribution 0.3	Treated 0.14 - 0.30 Distribution 0.24 - 0.40	N/A	N/A
Chlorate -Treated -Distribution	Qtrly 2013 & 2014	Treated 0.2 Distribution 0.3	Treated 99 - 650 Distribution 510 - 1100	N/A	N/A

#### Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Naval Air Station Lemoore is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [OPTIONAL: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <a href="http://www.epa.gov/lead">http://www.epa.gov/lead</a>.

# Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT

Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language
			Operations were modified to maintain	Some people who drink water-containing trihalomethanes in excess of the MCL
Exceedance of Total Trihalomethanes	LRAA Exceeded MCL (80 ug/L) 2 Quarters	2 Quarters	tighter control of disinfection byproducts by increased staffing and monitoring.	over many years may experience liver, kidney, or central nervous system problems, and may have an increased risk of getting cancer.
Failure to Monitor	Missed 1,2,3- Trichloropropane Sample	One sample	Increased review of sampling requirements  The sample was one of four. NASL conducted a follow up sample to replace the missing test.	Some people who drink water containing 1,2,3-trichloropropane in excess of the MCL over many years may have an increased risk of getting cancer.
			The results are that no 1,2,3-Trichloropropane were detected	

**Notes:**Upon laboratory notification of the Total Coliform Bacteria positive sample the day after the original sample on (17JUL18), Water System Operators resampled and confirmed that NO Bacteria was present as standard procedures require.

### For Water Systems Providing Groundwater as a Source of Drinking Water

TABLE 7 – SAMPLING RESULTS SHOWING FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLES							
Microbiological Contaminants (complete if fecal-indicator detected)  Total No. of Detections  Sample Dates  MCL (MCLG) (MCLG) [MRDLG]							
E. coli	(In the year)		0	(0)	Human and animal fecal waste		
Enterococci	(In the year)		TT	N/A	Human and animal fecal waste		
Coliphage	(In the year)		TT	N/A	Human and animal fecal waste		

# Summary Information for Fecal Indicator-Positive Groundwater Source Samples, Uncorrected Significant Deficiencies, or Groundwater TT

SPECIAL NOTICE OF FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLE
No Positive Samples
SPECIAL NOTICE FOR UNCORRECTED SIGNIFICANT DEFICIENCIES

No Uncorrected Signif	ficant Deficiencies			
	VIOLA	TION OF GROUNDWA	ATER TT	
TT Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language
No TT				
Violations				

### For Systems Providing Surface Water as a Source of Drinking Water

TABLE 8 - SAMPLING RESULTS SHOWING TREATMENT OF SURFACE WATER SOURCES			
Treatment Technique <sup>(a)</sup> (Type of approved filtration technology used)	Conventional Treatment		
	Turbidity of the filtered water must:		
Turbidity Performance Standards (b)	1 – Be less than or equal to 0.3 NTU in 95% of measurements in a month.		
(that must be met through the water treatment process)	2 – Not exceed 0.5 NTU for more than eight consecutive hours.		
	3 – Not exceed 1.0 NTU at any time.		
Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1.	98.2		
Highest single turbidity measurement during the year	2.0 NTU		
Number of violations of any surface water treatment requirements	None		

- (a) A required process intended to reduce the level of a contaminant in drinking water.
- (b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.

# **Summary Information for Violation of a Surface Water TT**

	VIOLATION OF A SURFACE WATER TT							
TT Violation	lation Explanation Duration Actions Taken to Correct the Violation							

## **Summary Information for Operating Under a Variance or Exemption**

We did NOT operate under any Variance or Exemption.

Consumer Confidence Report Page 7 of 7
Summary Information for Federal Revised Total Coliform Rule Level 1 and Level 2 Assessment Requirements
Level 1 or Level 2 Assessment Requirement not Due to an E. coli MCL Violation
Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially armful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water reatment or distribution. When this occurs, we are required to conduct assessment(s) to identify problems and to correct my problems that were found during these assessments.
Ouring the past year we were required to conduct Zero Level 1 assessment(s). Zero Level 1 assessment(s) were completed addition, we were required to take Zero corrective actions and we completed Zero of these actions.
During the past year Zero Level 2 assessments were required to be completed for our water system. Zero Level 2 ssessments were completed. In addition, we were required to Zero corrective actions and we completed Zero of these ctions.
Level 2 Assessment Requirement Due to an E. coli MCL Violation
<i>c. coli</i> are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human athogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely-compromised immune systems. We found <i>E. coli</i> bacteria, indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessment(s) identify problems and to correct any problems that were found uring these assessments.
No E. coli was detected in any samples taken for our water system.
